

CASH VALVES CRYOGENIC VALVES AND CONTROLS

A broad range of pressure build regulators, pressure reducing valves, final line gas valves and combination pressure build economizer valves for cryogenic service

FEATURES

- Six models for pressure reducing or pressure build-up service.
- Five models for back-pressure service on economizer circuit.
- Three models for combined pressure building and economizer functions.
- Low temperature cut-off valves.
- Two models for final line gas service.
- High purity regulating valves for pressure reducing, back pressure and differential services.
- All parts commercially cleaned for cryogenic/oxygen service or high purity gas compatibility.
- Complementary 'Y' pattern strainers reduce maintenance costs.
- Cryogenic safety and shut-off valves also available.

GENERAL APPLICATION

A variety of controls for cryogenic systems including liquid and gas line-pressure build-up regulators, economizer (heat leak) back pressure valves, temperature safety valves, combination valves, shut-off valves and final-line/service-line regulators.

TECHNICAL DATA

Materials:	Bronze, brass and stainless steel
Sizes:	1/4" to 2" (7 to 50 mm)
Connections:	Threaded NPTF (BSP optional on some models)
Max initial pressure:	650 psi (45.7 kg/cm ²)
Temperature ranges	
Standard range:	+150° to -320°F (339 to 78K)
High purity valves:	+400° to -425°F (478 to 19K)

LIQUID-GAS DISTRIBUTION SYSTEM SCHEMATIC DIAGRAM

- A. Type SY-70C
- B. Type B
- C. Type A-32
- D. Type E-55
- E. Type LTC
- F. Type FR
- G. Type C-776

* C-776 cryogenic safety relief valve - for additional information, write or call for data sheet VCTDS-00515.

** Shut-off valve - for additional information, see page 17.

OVERVIEW

Cryogenics - the science of materials at extremely low temperatures - has become increasingly important to industry. One important aspect of this field is the liquification of normally gaseous elements which are used widely throughout the industry, including:

- Oxygen - used extensively in BOF furnaces in the steel industry, for metal cutting, as a rocket fuel and in medicine.
 - Acetylene - widely used in welding.
 - Nitrogen - used in refrigeration systems, for metal degassing, in aerosol packaging and in cryogenic surgery.
 - Hydrogen - used as a rocket propellant and in the production of several metals.
 - Argon - widely used in incandescent lamps and fluorescent tubes.
 - Helium - used for arc welding, in the manufacture of electron tubes and in cryogenic research.
 - Carbon Dioxide - used in refrigeration, to make aerosol tanks and in fire fighting.
- Other cryogenic fluids include liquefied natural gas, fluorine, krypton, neon, methane and ethane.

The extensive range of Cash valves and controls is suitable for use in all the major areas of cryogenic converters, or 'dewars', which are either stationary or installed in over-the-road transport vehicles.

CASH VALVES CRYOGENIC VALVES AND CONTROLS

THE PRESSURE BUILD-UP CIRCUIT

The build-up circuit in the converter maintains a pressure of approximately 25 psi (1.76 kg/cm²) above that required to drive the liquid to the final vaporizer and a pressure differential of approximately 25 psi (1.76 kg/cm²) or higher across the service line regulator. To do this, liquid is drawn into the pressure build-up coil, where it is warmed by ambient air and vaporized. The gas then passes through the pressure build-up regulator and into the top of the tank, where it begins to build up pressure because expansion is limited by the fixed volume.

When this pressure reaches the pressure build-up regulator's set point, the regulator shuts off, stopping vaporization and pressure build-up. As liquid is forced from the tank to the final vaporizer, pressure in the tank begins to drop and the pressure build-up regulator returns to operation.

The pressure build-up regulator may be located in the liquid line before the pressure build-up coil. As it is now used for liquid rather than gas service, it may have a smaller orifice or be a smaller-sized valve. Its operation is the same as that of a gas regulator with the exception that it regulates the liquid flow before the pressure build-up coil rather than the gas flow after the coil. When pressure in the tank drops, the liquid pressure build-up regulator opens, allowing liquid to flow through the pressure build-up coil and vaporize.

Pressure build-up regulators are available for most cryogenic system applications. The Type A-32 is a small 1/4" (8 mm) pressure build-up valve; the larger Type B, Type G-60 and Type E-55 can be used for either liquid or gas.

The Type B is available in sizes from 1/4" to 2" (8 mm to 50 mm), the G-60 from 1/4" to 1 1/2" (8 mm to 40 mm) and the Type E-55 from 1 1/4" to 2" (32 mm to 50 mm).

A-32 PRESSURE REDUCING OR PRESSURE BUILD-UP SERVICE

Construction

Brass forged body and spring chamber; bronze trim and diaphragms; PTFE seat disc and diaphragm gasket; stainless steel pressure spring. All parts are commercially cleaned for cryogenic service.

Note: also available in stainless steel and special construction for hi-purity service. Contact your sales representative.

Temperature rating: +150°F to -320°F (339K to 78K)

Maximum initial pressure: 600 psi (42.18 kg/cm²)

REDUCED PRESSURE RANGES

Maximum working pressure	
psi	(kg/sq cm)

B PRESSURE REDUCING OR PRESSURE BUILD-UP SERVICE

Construction

Bronze body, spring chamber, trim and diaphragms; PTFE seat and diaphragm gasket; stainless steel pressure spring; stainless steel bolts and nuts; PTFE bottom-plug gasket; Monel® strainer screen. All parts are commercially cleaned for cryogenic service. Also available with BSP threads.

Temperature rating: +150°F to -320°F (339K to 78K)

Maximum initial pressure: 400 psi (28.12 kg/cm²)

Note: Type B95 available in stainless steel construction ½" thru 1" (15 to 25 mm) size.

CASH VALVES CRYOGENIC VALVES AND CONTROLS

G-60 PRESSURE REDUCING OR PRESSURE BUILD-UP SERVICE

Construction

Threaded ends; bronze body, spring chamber, diaphragms and trim; stainless steel pressure spring and body seat; PTFE seat and gaskets; stainless steel bolts. Closing cap over screw provided.

Also available with all system exposed internal parts in stainless steel. All parts are commercially cleaned for cryogenic service. Also available with BSP threads.

Note: also available in stainless steel and special construction for hi-purity service. Contact your sales representative.

Temperature rating: +150°F to -320°F (339K to 78K)
 Maximum initial pressure: 600 psi (42.18 kg/cm²)

CASH VALVES CRYOGENIC VALVES AND CONTROLS

E-55 PRESSURE REDUCING, PRESSURE BUILD-UP OR FINAL-LINE GAS SERVICE

Construction - for pressure reducing or pressure build-up service

Bronze body, spring chamber, trim; stainless steel body seat and pressure spring; PTFE seat, O-rings and bottom plug gasket; Monel® diaphragms and strainer screen; stainless steel bolts. All parts are commercially cleaned for cryogenic service. Also available with BSP threads.

Size range: 1/4", 1/2", 2" (32, 40, 50 mm)
 Temperature rating: +150°F to -320°F (339K to 78K)
 Maximum initial pressure: 400 psi (28.12 kg/cm²)

Construction - for final-line gas service

Bronze body, spring chamber and trim; stainless steel body seat and pressure spring; FKM seat disc and PTFE bottom plug gasket; FKM O-ring and neoprene diaphragm with FKM liner; Monel® strainer screen. All parts are commercially cleaned for oxygen service. Also available with BSP threads.

Size range: 1/2", 3/4", 1", 1 1/4", 1 1/2", 2" (15, 20, 25, 32, 40, 50 mm)
 Temperature rating: +150°F to 0°F (339K to 255K)
 Maximum initial pressure: 400 psi (28.12 kg/cm²)

Note: Specification for final-line gas service is not for use on cold gas or liquid (less than 0°F).

CASH VALVES CRYOGENIC VALVES AND CONTROLS

THE ECONOMIZER CIRCUIT

The economizer back pressure regulator is set from 10 to 25 psi (.70 to 1.76 kg/sq cm) above the set pressure of the pressure build-up regulator. When no gas is being used and heat leakage in the tank causes a gas pressure build-up, the excess pressure is by-passed into the final vaporizer line to conserve gas rather than allow the safety valve in the pressure build-up circuit to relieve the excess gas into the atmosphere.

Five types of back pressure valves are available for this circuit: the Type FRM, low flows, max. 600 psi (42.18 kg/cm²); FRM-2, medium flows, max. 250 psi (17.58 kg/cm²); FRM-2 (HP) high pressure, medium flows, max. 400 psi (28.12 kg/cm²); FR, large flows, max. 400 psi (28.12 kg/cm²) and the FR-6, max. 600 psi (42.18 kg/cm²).

FRM BACK PRESSURE OR ECONOMIZER SERVICE

Construction

Threaded ends; 2-way, side inlet-side outlet; 2-way, side inlet-bottom outlet; 3-way, 2 side inlets-bottom outlet; forged bronze body; bronze diaphragms; stainless steel seat disc, seat ring and pressure spring; PTFE diaphragm gasket. All parts commercially cleaned for cryogenic service.

Note: Also available in stainless steel and special construction for hi-purity service. Contact your sales representative.

Temperature rating: +150°F to -320°F (339K to 78K)
 Maximum set pressure: 600 psi (42.18 kg/cm²)

CASH VALVES CRYOGENIC VALVES AND CONTROLS

COMBINATION PRESSURE BUILDER-ECONOMIZER

PBE Series regulators combine the pressure building and economizer functions into one unit. The economizer phase starts at the point at which the pressure build level is reached, assuring a smooth transition between the two functions. For sizing information, please request engineering data sheets 1074 (PBE-1A) and 1077 (PBE-2).

PBE-1A COMBINATION PRESSURE BUILDER-ECONOMIZER

Construction

Forged brass body and spring chamber; brass and stainless steel trim; PTFE/Armalon or bronze diaphragm; stainless steel pressure spring. All parts are commercially cleaned for oxygen service.

Temperature rating: +150°F to -320°F
(339K to 78K)
Maximum initial pressure: 600 psi
(42.18 kg/cm²)

PRESSURE RANGES

Max. working pressure	
psi	(kg/sq cm)
50-175	(3.52-12.32)
150-350	(10.55-24.61)

1/4	(8)	2 1/4	(57.15)	3 1/8	(79.38)	7/8	(22.29)	1.4	(0.65)

Low pressure - ranges to 175 psig
High pressure - ranges 150-350 psig

PBE-2 COMBINATION PRESSURE BUILDER-ECONOMIZER

Construction

Bronze body, spring chamber, trim and diaphragms; PTFE seat and diaphragm gasket; stainless steel economizer seat; stainless steel spring, nuts and bolts. All parts are commercially cleaned for oxygen service.

Temperature rating: +150°F to -320°F
(339K to 78K)
Maximum initial pressure: 400 psi
(28.12 kg/cm²)

PRESSURE RANGES

Max. working pressure

CASH VALVES CRYOGENIC VALVES AND CONTROLS

LOW TEMPERATURE CUT-OFF VALVES

The temperature control valve between the vaporizer and service line regulator is designed to shut off the gas flow if the gas temperature drops below a pre-determined point, usually -20°F (144.4K), often caused by a rapid or quick gas draw. If the temperature drops below the temperature control valve's setting, the valve closes to prevent excessively cold gas from reaching the service end of the system. In particular, the cold gas is prevented from contacting the final-line regulator, which is not constructed or intended for such low-temperature conditions. The valve opens automatically when gas temperature rises above the set point.

The Type LTC temperature control valve is a double-port valve with a range of 0°F to -40°F (255K to 233K) for low temperature cut-off. As it is subject to ambient temperature under normal conditions, it will normally be in a wide-open position. A copper well is recommended for each installation, which allows the removal of the capillary bulb without depressurizing the system.

Note: valve seat closure may take several seconds under normal operating conditions. In addition, Type LTC fails in the closed position.

LTC REVERSE-ACTING TEMPERATURE REGULATOR FOR CRYOGENIC SERVICE

Construction

Brass union ends; bronze body and trim; copper capillary armor and bellows; PTFE gasket and packing; stainless steel spring; copper bulb and capillary.
Copper bulb is 1/2" x 5.82" (15 mm x 147.83 mm). All parts are commercially cleaned for oxygen service. A copper well is available as an option and is recommended for each cryogenic application.

Maximum operating limits

Operating temperature range is 0°F to -40°F (255K to 233K); standard setting is -20°F (244K).
Maximum temperature limit is 300°F (408K); minimum temperature limit is -320°F (78K).
Maximum body pressure on all sizes is 400 psi (28.12 kg/cm²); however, for proper operation, maximum pressure differentials as shown on page 21 must be observed.

Note: psid values are pressure drops across valve.

TO DETERMINE CAPACITY

Determine operating pressure level at the valve and the maximum allowable pressure drop across the valve. Then refer to table above reading down the appropriate column to the selected pipe size. As an example: you are operating at a 150 psi pressure level and the maximum allowable pressure drop across the valve is 2 psi. Look at the second table under the 150 psi level and 2 psid column. For a 1 1/4" pipe size, the capacity would be 38,665 SCFH. Note: the values shown in the table are for oxygen gas; all capacity figures are standard cubic feet per hour. To determine capacity figures for other gases, consult the conversion chart below and multiply the chart capacities by the factor given.

CASH VALVES CRYOGENIC VALVES AND CONTROLS

FINAL LINE CIRCUIT (HOUSE LINE)

Liquid is forced into the vaporizer through the liquid line by the action of the vapor pressure in the tank. The liquid in the vaporizer is warmed by ambient air (or sometimes by steam) and changed into gas, which is then distributed through the final-line regulator. As the gas is at or near ambient temperature, the diaphragm and seat in the regulator can be furnished in standard rubber materials.

A-31 PRESSURE REDUCING VALVE FOR FINAL-LINE GAS SERVICE

Construction

Brass forged body, brass piston; NBR seat disc and diaphragm; aluminum spring chamber; stainless steel spring. All parts are commercially cleaned for oxygen service. Standard valve has side inlet-side outlet connections. Also available with side gauge connections.

Temperature rating: +150°F to 0°F [339K to 255K]
 Maximum initial pressure: 400 psi (28.12 kg/cm²)

CASH VALVES CRYOGENIC VALVES AND CONTROLS

HIGH PURITY REGULATING VALVES

A line of high purity regulating valves for electronic grade and other high purity gases is also available. This includes pressure reducing valves, back pressure valves and valves suitable for differential service.

Valve bodies are investment cast 316L stainless steel, with internal trim 316L bar stock. Interior (wetted) surface finish is 15 micro inch or better. The finish is electropolished. Also, all maintenance may be carried out without removing the valve from the line.

Sizes are 1/2" to 1 1/2", butt weld ends, 0.065 wall (1/2" size, 0.049 wall). Spring ranges are typically up to 400 psig (28.12 kg/cm²) control.

Temperature limits are 400°F [478K] to -425°F [19K]. All valves are cleaned for high purity gas compatibility.

Contact your sales representative for additional information and pricing.

C-776 SAFETY VALVE

Type C-776 cryogenic safety valves are available in sizes from 1/2" thru 2" (15 to 50 mm).

Request data sheet VCTDS-00515 for details.

2300 SHUT-OFF VALVE

Type 2300 is a brass shut-off globe style valve with 1/4", 3/8", and 1/2" (7, 10.5 and 15 mm) NPTF connections. It offers the option of a stainless steel stub end inlet connection with a 3/8" (10.5 mm) NPTF outlet connection.

Temperature rating: +150°F to -320°F [339K to 78K]

Maximum inlet pressure: 700 psig [49.2 kg/cm²]

SY-70C 'Y' PATTERN STRAINERS

These strainers are suited for most cryogenic applications. Installed in the line ahead of automatic regulators, they protect valve seats, gauges, meters, regulators and other equipment from most foreign material to reduce maintenance costs and replacement expense.

Construction

ASTM B62 high-tensile cast bronze body, 100 mesh Monel® strainer screen; a brass blowoff plug is shipped with each strainer. All parts are commercially cleaned for cryogenic service.

Temperature rating: +150°F to -320°F (339K to 78K)
 Maximum set pressure: 400 psi (28.12 kg/cm²)

Capacity information

Capacity information is available on request. Write to the factory supplying full valve and application specifications.

NOTE

NPTF, also referred to as 'Dryseal' thread, is designed to provide a more leak-free seal without the use of PTFE tape or other sealant compound. NPTF threads are interchangeable with NPT threads and are standard on all Cash Valve products.
